

Develop an Enterprise Risk Management (ERM) Program through ISO9001

The increased interest in and importance of enterprise risk management are being driven by many powerful forces. This leads to the question of “Where do we start?”

Do you know that ISO9001 can provide you the backbone to enable a good enterprise risk management implementation?

ERM is the term used to describe overall Risk Management approach of an organization to influence strategic direction, profitability and improve the organization's resilience to adverse events.

Both ERM and ISO9001 frameworks are led from the top and are designed through a People, Process and Technology approach. Utilizing a unified methodology, both organizational performance and resilience of the organization can be improved and enhanced.

PNMS' HRDC-claimable programs enable us to provide direct coaching and advisory to clients in integrating and sustaining enterprise risk management processes via any ISO management systems. As former corporate practitioners, PNMS' consultant fully understand the nuances and challenges in implementing such programs in organizations.
